Now you can do everything you need to from home, work or anywhere you have Internet access.

# How Safe Is It?

Online Banking is a safe and secure way to handle your banking transactions. You can do your part by protecting your own information.

## ***Enhanced Login Security***

The exchange of private information over the Internet can be a daunting experience, but privacy and security are possible through the use of encryption technology. Secure Sockets Layer (SSL) encryption scrambles your private data as it transmits over the Internet, protecting it from being deciphered and used fraudulently. Online banking environments require the highest level of confidentiality protection available in the form of 128-bit encryption. Logging into your banking system to process private transactions over the Internet will require that your Internet browser supports 128-bit encryption.

# Logging In

Using a browser, enter your Financial Institution's website address, then your Online Banking User Name and Password. Then, open Bill Pay to start paying your bills online. Once you are in the system, look for the tool bar of options.
